

**ARCTICFOX****TANDY & COMPATIBLES****GETTING STARTED**

Insert a disk containing DOS 2.0 or higher in drive A and turn on your computer. When the **A>** prompt appears, put the *Arcticfox* program disk in drive A. If you have a Hercules™ monochrome-graphics display card in your computer, type **RUNFOXH** and press **Enter**. For any other display adapter, type **RUNFOX**, press **Enter**, and a configuration screen soon appears that lets you configure *Arcticfox* for the display capabilities of your computer. Press **1** if your computer is an IBM-style PC, or press **2** if your computer is a Tandy PC. The title screen soon appears, followed by a scrolling list of credits and options. The Enemy Preview begins after 60 seconds of inactivity.

*Arcticfox* automatically looks at your computer and adjusts the speed at which the game runs. However, if the game still runs too fast or too slow, set the game speed manually by simultaneously pressing **Control** and a number from **1** through **5** — **Control-1** is the slowest speed and **Control-5** the fastest. Press the **Spacebar** or one of the skill level keys to leave the title screen and start the game.

## SKILL LEVELS

In addition to an Enemy Preview mode, there are three different skill levels at which you can play *Arcticfox*. See page 2 of the manual (located inside the front cover of the package) for more information about the various skill levels. To select a skill level, press a function key:

**F1** Enemy Preview  
**F2** Training Level

**F3** Beginner Level  
**F4** Tournament Level

At Tournament Level you can choose the enemy configuration and your starting location through a series of onscreen prompts, or you can let the computer randomly make the choice for you.
